WALWORTH

WALWORTH is one of the world's most comprehensive industrial valve manufacturers. Founded in 19th century by James Walworth, the Company has consistently dedicated itself to improvements in design and manufacturing of an array of valves exceptionally suited for the world's fluid control sector. We satisfy all end use industries and comprehensive customer requirements by adhering to the most demanding quality standards.

WALWORTH relies on its broad experience in supplying valves to the petrochemical, oil & gas, petroleum, power generation, pulp and paper, cryogenic and geothermal industries, among others.

Over the years, Walworth has produced over 40,000 different types of products and serves as a global supplier to various markets utilizing the expertise of over 500 trained employees.

Our manufacturing system includes: utilization of Company directed raw material warehouses; modern and newly acquired specialized machinery; welding processes such as SMAW, GMAW, SAW, PAW; assembly testing for all low pressure, high pressure, and at low or high temperatures; painting and coating processes; export crating and shipment.

WALWORTH is capable of providing the world's most comprehensive industrial valve line to the North American, Central American, South American, European and African markets. WALWORTH is proud to meet and satisfy the precise demands of our customers throughout the world by providing a quality product, competitive cost, and excellent service.

WALWORTH VALUES

MISSION

WALWORTH manufactures and supplies world-class valves and components for the flow control industry through exceptional service, competitive pricing, and consistently, on-time deliveries.

VISION

To be the world leader of unparalleled valve manufacturing and supply, WALWORTH:

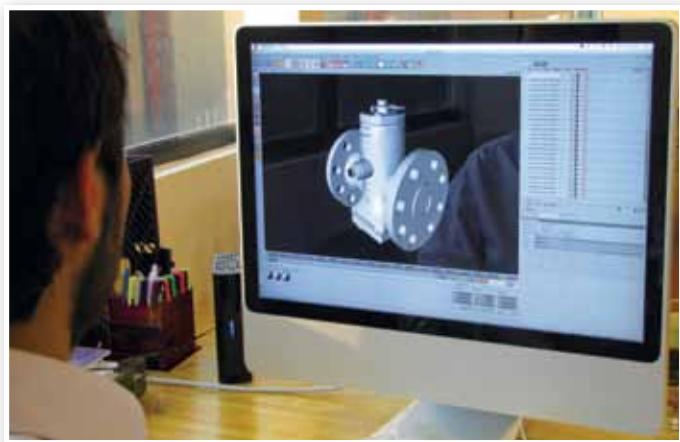

- Set the standard for product quality in the flow control industry.
- Exceed the service expectations of our customers.
- Forge enduring relationships with customers, team members, and community.
- Hire, develop, and retain experienced and dedicated team members.

WALWORTH ENGINEERING CONTROL

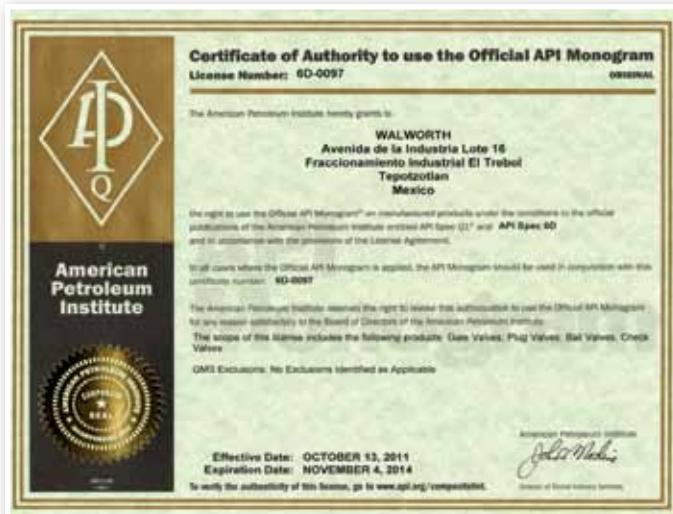

WALWORTH products are manufactured following the strict international standards recognized all over the world, such as API, ANSI, ASME, ASTM, MSS, NACE, AWWA, BSI, CSA, among others. Our Engineering team consistently monitors updates to these standards and incorporates any applicable changes that affect the design, regulations and/or performance of our products.

Our designs are made using the most advanced technology and equipment, finite elements, and CAD system programs to ensure proper assembly and performance. From conception to calculation to detailed drawings for manufacturers, WALWORTH is a leader in development of new products that meet the needs of the current valve market."

WALWORTH QUALITY SYSTEM

Throughout the years, WALWORTH has developed its Quality System which is an integral part of our manufacturing policy. Our primary goal is to provide products that meet and exceed market standards. In this sense, WALWORTH is an ISO-9001 Audited and Certified Company that has achieved major certifications worldwide. Our system includes the selection of raw materials from approved vendors, and rigorous oversight of our manufacturing process that is vital to quality control. The use of serial numbers allows WALWORTH the ability to not only ensure the quality of components used but to monitor and trace the fabrication process as well.

Certificate API-6D No. 6D-0097 issued by American Petroleum Institute to apply on Gate valves, Plug valves, Ball valves and Check valves manufactured in accordance with API-6D specification.

Certificate API-6A No. 6A-0234 from American Petroleum Institute to apply on valves at PSI 1 through 4.

- Certificate ISO-9001 No. 0038 issued by American Petroleum Institute since April 1999.

- Certificate as per PED 97/23/EC Module H to stamp CE products.

- Certificate of Reliable Supplier No. 082/11 issued by CFE in accordance with ISO-9001 Quality Assurance System.

- Certificate NMX-CC-9001 (Mexican Standards ISO-9001) No. 0552/2007 issued by PEMEX in accordance with ISO-9001 Quality Assurance System.

In addition to the Quality System Certifications, WALWORTH has achieved the following specific product certifications:

CERTIFICATE
Certificate No.: 01 202 USA-TA-09-79768
Concerning the Agreement with the Technical Requirements in:
TA-Luft 2002, VDI 2440 Nov. 2000, Sec. 3.3.1.3

Test report:	200148	Datum:	10 December, 2000
Client:	Industrial de Valvulas, S.A. de C.V.		
Manufacturer's Address :	Av. De la Industria Lote 16 Fracc. Industrial El Trebol, Tepotzotlán, Edom. De México, CP 54600		
The stem sealing system and internal flange connection have been successfully tested to meet the tightness criteria of $\leq 10^{-3}$ mbar \times [h x m] with a helium mass spectrometer under the following conditions: The BV Valve with the examined mechanical shaft seals fulfills the requirements of Section 3.2.6.4 of the German Clean Air Act, (TA-Luft). (Leakage Verifikatur) in accordance with Section 3.3.1.3 of VDI 2440 (Rev. 2000).			
Kind of Valve:	Walworth API 600 Gate Valve		
Valve Type:	4 inch, Class 200, Figure 6308P		
Sealing System:	Graphite Seats		
Nominal Size, Nominal Pressure:	4 inch, ANSI 300		
Inspection Media/Pressure:	Helium / 95 Bar Temperature = Ambient		
Switching Cycles (2min):	0 Cycles	Total Cycles 500	
Leakage Rate [mbar · l/sec]	6.3e-7 (mbar · l/sec)	3.7e-6 (mbar · l/sec)	
Testing Method:	Helium Leak Test - VDI 3440, Appendix A

YARMOUTH RESEARCH AND TECHNOLOGY
PROJECT SUMMARY

Project Number: 99068
Customer: The Walworth Company
Contact: David Cornelisen
Date(s) of Test: 12/9/99 – 12/20/99
Product(s) Tested: One 4" Class 200 Gate Valve with Empak-Mex EAF-100-001 packing.

Purpose of Test: The test was conducted to evaluate the valve's stem sealing performance at ambient and at 350° F as related to the 1990 Amendments to the Clean Air Act requirements. Leakage measurements were conducted in accordance with API 6D, Appendix A, Method 21.

Conclusion: Three thermal cycles from ambient to 350 deg. F were conducted throughout 3500 open/close cycles with the valve pressurized to 645 psig. The valve was cycled with a 45 RPM gear motor coupled to the valve handle. One packing gland adjustment was required at cycle number 300 to minimize leakage levels below 100 PPMs.

At cycle number 3500, the packing leakage was 25-29 PPMs with the stem static. The packing nuts were tightened from 12/14 ft-lb back to 28 ft-lb and leakage decreased to about 1 PPMs.

See the attached data sheets for more information.

Reference: [Witness Report - API Spec 6FA Fire Test](#)
Number 01-1 / 05

This will certify that the following listed valve successfully passed all requirements of API Specification 6FA Fire Test for Valves, Third Edition dated April 1999 and API Standard 607 Fire Test for Soft-Seated Quarter-Turn Valves, Fourth Edition dated May 1993. The tests were made and verified on January 21, 2005.

API 6D Trunnion Mounted Ball Valve, 12-inch Class 150 Figure 8122, Serial Number V05B01.

The successful test of the 12-inch Class 150 API 6D Ball Valve qualifies this design/type of valve as meeting the requirements of API Spec 6FA / API Std 607 for sizes 12-inch through 24-inch in pressure classes 150 and 300.

Sincerely,

David J. Cornelisen P.E.
President

- Fire Test Certificate No. 04/04 in accordance with API-6FA and API Standard API-607 for Trunnion Ball Valves in accordance with API-6D.

Emissions after 500 cycles at ambient and 350 °F issued by Yarmouth Research and Technology Lab for 3 inch Class 300 Gate Valve After 500 cycles the measurement result was less than 50 ppm.

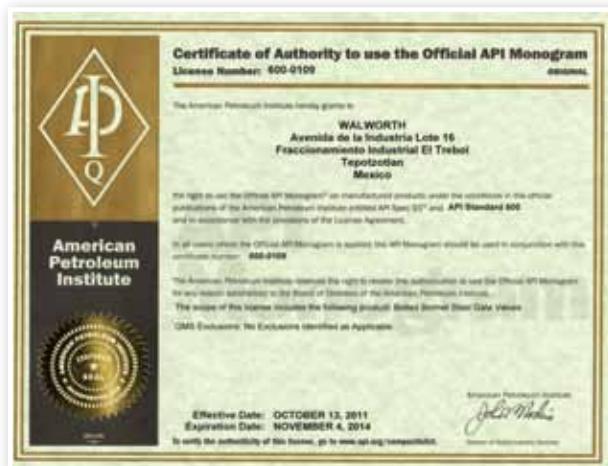

Emissions after 500 cycles at ambient and 350 °F issued by Yarmouth Research and Technology Lab for 8 inch Class 300 Gate Valve After 500 cycles the measurement result was less than 50 ppm.

Emissions after 500 cycles at ambient and 350 °F issued by Yarmouth Research and Technology Lab for 16 inch Class 150 Gate Valve After 500 cycles the measurement result was less than 50 ppm.

Certificate API-594 No. 594-0007 issued by American Petroleum Institute to apply on Check Valves-Type A; Check Valves Type B manufactured in accordance with API-594 specification.

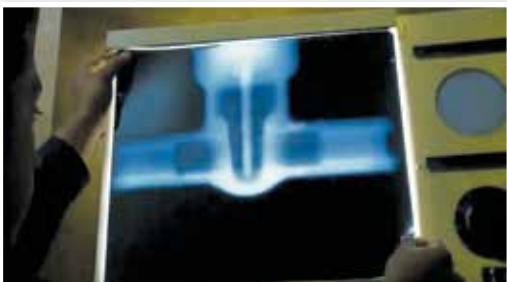

API-600 Certificate No. 600-0109 issued by American Petroleum Institute to apply on Bolted Bonnet Steel Gate Valves manufactured in accordance with API-600 specification.

API-602 Certificate No. 602-0024 issued by American Petroleum Institute to apply on Compact Steel Gate Valves, Compact Steel Globe Valves, and Compact Steel Check Valves manufactured in accordance with API-602 specification.

QUALITY CONTROL EQUIPMENT

In order to assure that WALWORTH products comply with international quality standards, in-house equipment is kept for monitoring control. Some of this equipment includes:

X-Ray Examination Equipment. WALWORTH has its own Ir-92 source in-house for the radiographic examination (RT) of castings from 0.100" up to 2 1/2" wall thickness to verify the soundness of the casting raw material.

PMI Equipment. A new generation of Positive Material Identification Equipment gives WALWORTH the capability to perform quick chemical analysis on incoming raw materials and on pieces after assembly, to certify that materials used were produced and assembled in accordance with WALWORTH's and our Customer's specifications.

Magnetic Particle Test. On a random basis for standard products or when a Customer requests MT Certification, WALWORTH has Magnetic Particle Test Equipment to perform on ferromagnetic materials.

Penetrant Test Examination. WALWORTH has the personnel and materials to perform PT examination by solvent removable or water washable techniques. NDT personnel are ASNT Certified.

Test Loop. A complete Laboratory Test loop exists for design validation of WALWORTH products. The test is performed at maximum design pressure, advances the valves from 3000 to 5000 cycles, and requires more than four months to complete.

Pressure Gradient Test Loop. This test exposes Plug valves to the extremes of both positive and negative pressure gradients to verify that the plug in a balanced plug design will prevent lock-up in the body.

Metrology Laboratory. WALWORTH developed a calibration and/or verification system in all of the equipment used in its facilities. This ensures our ability to trace measurements, control products, and comply with international standards.

Fire Test Facilities. WALWORTH has the facilities to perform fire tests in accordance with API requirements. The test exposes the valve to a fire flame at 1400 to 1800 °F (761 to 980 °C) to verify proper seal of the valve.

Low Fugitive Emissions Test. This test is performed when a Customer requires low fugitive emissions certification. Our Lab has its own LFE test equipment that is capable of measuring less than 20 ppm in both static and mechanical conditions at either ambient temperature or thermal cycle operations.

Ultrasonic Testing Equipment. Using ultrasonic techniques, we can detect sub surface flaws in materials and evaluate castings and forgings that cannot be radiographed. In addition, we utilize these techniques to measure the wall thickness of castings and forgings.

Tensile Test Equipment. We use this equipment to verify the mechanical properties of materials used for manufacturing. WALWORTH tests samples on a random basis even though we receive MTRs from our suppliers and foundries.

Hardness Test Equipments. In both lab and shop tests, WALWORTH uses hardness tester equipment, such as Rockwell B, C Brinell or Vickers, to ensure compliance with specifications.

WALWORTH FORGED STEEL VALVES

FORGED STEEL, ALLOY AND STAINLESS STEEL

WALWORTH offers this product line manufactured in accordance with API-602. and ANSI Classes 800, 1500 and 2500 for socket weld, threaded and combined ends. Also available are Integral Flanges in 150, 300, 600 and 1500 either Raised Face or ring type joint ends.

WALWORTH keeps a large quantity of these valves in stock in the most common trims used by the industry. For Certain Customer applications where forged material is not available (specifically for high nickel alloys), WALWORTH has developed this product line using sand casting. In order to keep the same quality level as forged, these castings are produced with 10% of each lot to be subject to X-ray examination

WALWORTH offers the majority of materials known and used for this product line, including but not limited to:

1. Carbon Steels A105.
2. Low Carbon Steels LF2, LF3.
3. Low Alloy Steels F1, F11, and F22.
4. Medium Alloy Steels F5, F9, and F91.
5. Stainless Steel Valves F304, F316.
6. Low Carbon Stainless Steel F304L, F316L.
7. Duplex Stainless Steel F51, F53.
8. Nickel Alloys Inconel, and Monel.

When cast steel valves are manufactured in accordance with API-602. as an acceptable option, WALWORTH offers this product line in the following materials either socket weld, threaded or flanged ends:

1. Stainless Steels CF8, CF8M, CF8C, CF10, CG8M.
2. Low Carbon Stainless Steels CF3, CF3M, CG3M.
3. Super Stainless Steels CN7M (Alloy 20), CN3M (Alloy 20 modified), CT15C.
4. High Nickel Alloys Monel M30C, Monel M35-1, Monel CZ100, Inconel CY40, (Inconel 600), CW2M (Hastelloy C4), N12MV (Hastelloy B), CW12MW (Former Hastelloy C-276), CW6M (New Hastelloy C-276), CU5MCuC (Incoloy 825), N7M (Hastelloy B2), CW6MC (Inconel 625).
5. Duplex Stainless Steel CE8MN, CD6MN, CD3MN.
6. Super Duplex Stainless Steel CE3MN, CD3MNWCuN.
7. Aluminum Bronze 95500, 95600, 95800.

TYPE	SIZE	PRESSURE CLASS AS PER API 602 AND ASME/ANSI B16.34 FOR SW OR NPT ENDS	PRESSURE CLASS AS PER API 602 AND ASME/ANSI B16.34 FOR RF OR RTJ ENDS
Gate	1/4" to 2"	800, 1500 & 2500	150, 300, 600, & 1500
Globe	1/4" to 2"	800, 1500 & 2500	150, 300, 600, & 1500

FORGED STEEL VALVES BODY MATERIALS

WALWORTH offers the standard product line of API-602 Forged Steel valves in a wide variety of carbon steel, low and medium alloy materials, that can be used in combination with listed API-602 trims.

However, due to the actual requirements that the global market demands, WALWORTH now offers additional materials like stainless steel, nickel and exotic alloys. Also, WALWORTH offers a new product line for valves with heavy wall thickness in Aluminum Bronze, either ASTM B148 grade 95500, 95600 or 95800.

ASTM B469 8904	21% Chrome; 25.5% Nickel; 4.5% Mo; 1.5%Cu; 0.02% C Super Stainless Steel	ASTM A351 CN2MCuN	Grade ASTM B625 8904		8904H	8904H
ASTM A182 F6	12% Chrome Steel	ASTM A487 Grade CA15	ASTM A276 410	Corrosive application at temperatures between -20°F (-30°C) and + 900°F (+482°C).	UT, HF	UT, HF
ASTM A182 F6	12% Chrome Steel	ASTM CA6NM	Grade ASTM A276 410	Corrosive application at temperatures up to +1300°F (704°C). Boiler feed water 250 °F (115°C), sea water, steam sulfur.	UT, HF	UT, HF
ASTM B564 N04400	67% Ni; 30% Cu, Monel	ASTM M-35-1	Grade ASTM B164 N04400	Weldable grade. Good resistance to corrosion by all common organic acids and salt water. Also highly resistant to most alkaline solutions to +7°F (+400°C)	A, AHF	A, AHF
ASTM B160 N02200	95% Nickel	ASTM CZ100	Grade ASTM B160 N02200	Chemical processing, mineral processing, food processing. Nicel is useful in handling hot concentrate alkaline or caustic solutions, reducing acids, certain food products, organic acids under certain conditions, dry chlorine and anhydrous ammonia. Cast nickel is not applicable in oxidizing acids and alkaline perchlorite.	2200	2200
ASTM B564 N06600	75% Nickel; 15% Cr; 8% Fe, Inconel 600	ASTM CY-40	Grade ASTM B166 N06600	Very good for high temperature service. Good resistance to strongly corrosive media and atmosphere to + 800°F (+425°C). Hot boiler feed water, hot caustics, hot concentrate alk water, elevated temperature oxidizing conditions.	600, 600HF	600, 600HF
ASTM B564 N06625	60% Nickel; 22% Cr; 9% Mo; 3.5% Cb, Inconel 625	ASTM CW6MC	Grade ASTM B446 N06625	Very good for high temperature service. Good resistance to strongly corrosive media and atmosphere to + 800°F (+425°C).	625, 625HF	625, 625HF
ASTM B425 N08825	42% Nickel; 21.5% Cr; 3% Mo; 2.3% Cu, Incoloy 825	ASTM CU5MCuC	Grade ASTM B425 N08825		825, 23HF	825, 23HF
ASTM B335 N10001	62% Nickel; 28% Mo; 5% Fe, Hastelloy B	ASTM N12MV	Grade ASTM B335 N10001		10001, HB	10001, HB
ASTM B335 N10665	62% Nickel; 28% Mo; 2% Fe, Hastelloy B2	ASTM A494 Grade N7M	ASTM B335 N10665		HB	HB
ASTM B574 N06455	61% Nickel; 16% Mo; 16% Cr, Hastelloy C4	ASTM CW2M	Grade ASTM B574 N06455	Good resistance to strong oxidation conditions.Good properties at high temperatures, high resistance to formic, phosphoric, sulphurous and sulfuric acids to + 1200°F (+649°C)	6455H	6455H
ASTM B574 N10276	56% Nickel; 18% Mo; 17% Cr; 6% Fe, Hastelloy C-276 (FORMER ALLOY)	ASTM CW12MW	Grade ASTM B574 N10276	Good resistance to strong oxidation conditions.Good properties at high temperatures, high resistance to formic, phosphoric, sulphurous and sulfuric acids to + 1200°F (+649°C)	HC, HCH	HC, HCH
ASTM B574 N10276	56% Nickel; 19% Mo; 18% Cr; 16% Fe, Hastelloy C-276 (NEW ALLOY)	ASTM CW6MC	Grade ASTM B574 N10276	Good resistance to strong oxidation conditions.Good properties at high temperatures, high resistance to formic, phosphoric, sulphurous and sulfuric acids to + 1200°F (+649°C)	HC, HCH	HC, HCH

WALWORTH FORGED STEEL VALVES TRIM ARRANGEMENTS

WALWORTH valves are available in the widest range of standard and special trims available in the Industry. The following table shows the most popular trims used for the valves currently offered by the Company.

Special trims as per Customer requirements are available upon request. Please contact your closest WALWORTH Distributor.

WALWORTH TRIM Nr.	API-602 TRIM Nr.	SEAL MATERIAL TYPE	STEM AND OTHER TRIM PARTS (1)	WEDGE/DISC SEAT SURFACES	BODY SEAT SURFACES (2)

Notes:	1. The percentage (%) shown on the elements is the maximum except where ranges are indicated. 2. Steel F347 should have a Columbium content of not less than 8 times the carbon content, but not exceeding 1%.									

FORGED STEEL GATE VALVES

The Gate Valve is used when the need exists for a device that allows an interruption or cut off in the flow of fluid. Gate Valves are not to be used for flow modulation as the high velocity through a partially open valve may result in erosive damage to the wedge and seats. Under normal operating conditions, the valve should remain either fully open or fully closed. Installation of a Gate Valve is independent of the flow direction.

DESIGN FEATURES

- Valves in accordance with API-602..
- Socket Weld, Threaded, Combined or Flanged RF or RTJ ends.
- Bolted Bonnet or Welded Bonnet options.
- Expanded Seat Rings.
- Low fugitive emissions control.
- NACE Service either MR-0175 or MR-0103.
- Test in accordance with API-598.

Rising stem with precision acme double thread for quick operation.

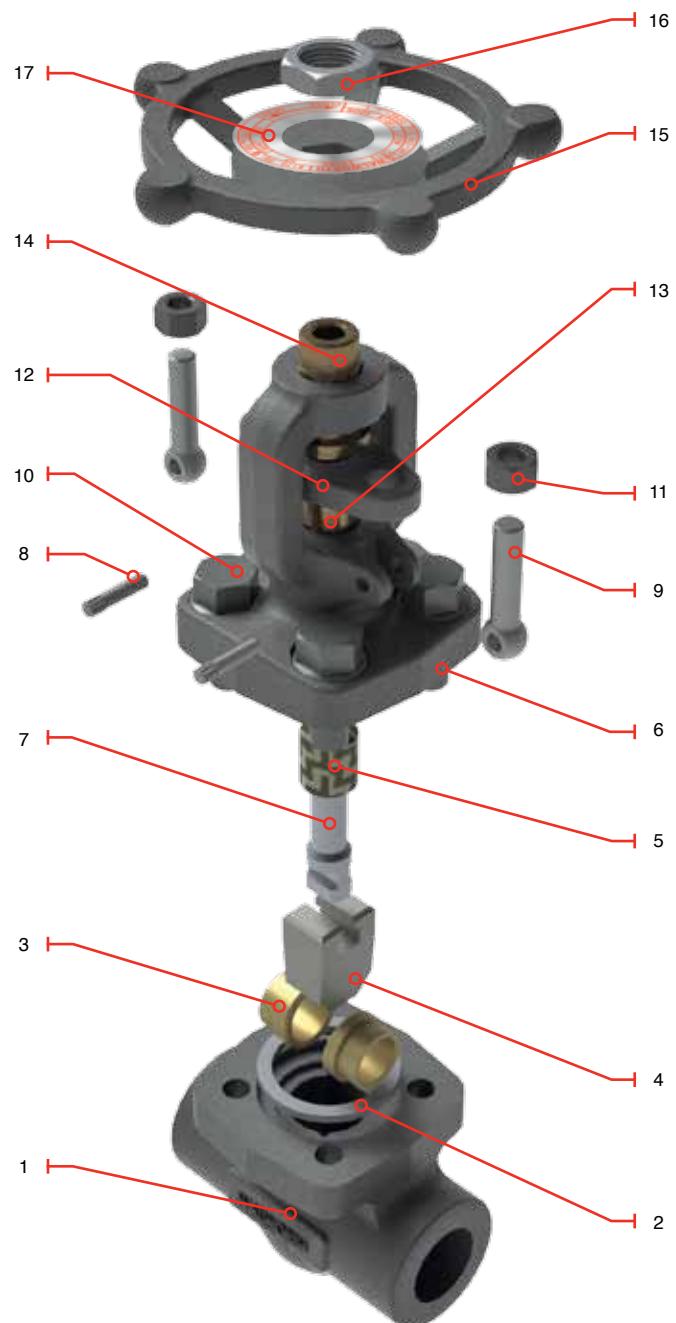

Stem-gate connection designed so that under severe applied loads (stuck gate), the stem will fail outside of the stuffing box pressure boundary.

Stem packing is designed for optimum control of fugitive emissions leakage to the atmosphere. The ultra-low emission leakage rate is assured by the fine finish on the stem sealing area, the reduced diametrical clearances and the stem straightness control.

Backseat designed to relieve back pressure on the stem packing when fully seated. Replacing stem packing under pressure is not recommended.

Body to bonnet joint designed to apply a uniform load to the gasket to assure a leak proof seal.

Stellite seat rings provide increased resistance to wear, abrasion and erosion of the sealing surfaces.

WALWORTH FORGED STEEL GLOBE VALVES

The Globe Valves are primarily used to modulate or regulate the volume of the flow.

A Globe Valve is not recommended when a continuous full flow of fluid is required due to the high pressure drop inherent to the design of a Globe Valve.

This type of valve should always be installed so the flow intake enters through the base of the valve seat. The valve has an arrow stamped on the body to indicate the preferred direction on flow.

Globe Valves may be used with fluids containing particles in suspension.

DESIGN FEATURES

- Valves in accordance with API-602.
- Socket Weld, Threaded, Combined or Flanged RF or RTJ ends.
- Bolted Bonnet or Welded Bonnet options.
- Standard or Full Port.
- Low fugitive emissions control.
- NACE Service either MR-0175 or MR-0103.
- Test in accordance with API-598.

Rising stem with precision acme thread.

Stem packing is designed for optimum control of fugitive emissions leakage to the atmosphere. The ultra-low emission leakage rate is assured by the fine finish on the stem, the reduced diametrical clearances and the stem straightness control.

Backseat designed to relieve back pressure on the stem packing when fully seated. Replacing stem packing under pressure is not recommended.

Body to bonnet joint designed to apply a uniform load to the gasket to assure a leak proof seal.

Stellite seat ring, providing increased resistance to wear, abrasion and erosion of the sealing surface.

Integral welded seat or threaded seat.

WALWORTH FORGED STEEL "Y" PATTERN GLOBE VALVES

The "Y" Pattern Globe Valves are primarily used to modulate or regulate the volume of the flow when a minor flow is required.

A "Y" Pattern Globe Valve is recommended when a continuous full flow of fluid is required due to the highest CV against a "T" Pattern Globe Valve.

Also suitable for solving some troubles in the field when space limits the usage of a standard "T" Pattern Globe Valve.

This type of valve should always be installed so the flow intake enters through the base of the valve seat. The valve has an arrow stamped on the body to indicate the preferred direction of the flow.

Globe Valves may be used with fluids containing particles in suspension.

DESIGN FEATURES

- Valves in accordance with API-602..
- Socket Weld, Threaded, Combined Threaded x Socket Weld
- Bolted Bonnet or Weld ed Bonnet options.
- Standard or Full Port.
- Low fugitive emissions control.
- NACE Service either MR-0175 or MR-0103.
- Test in accordance with API-598.

Rising stem with precision acme thread.

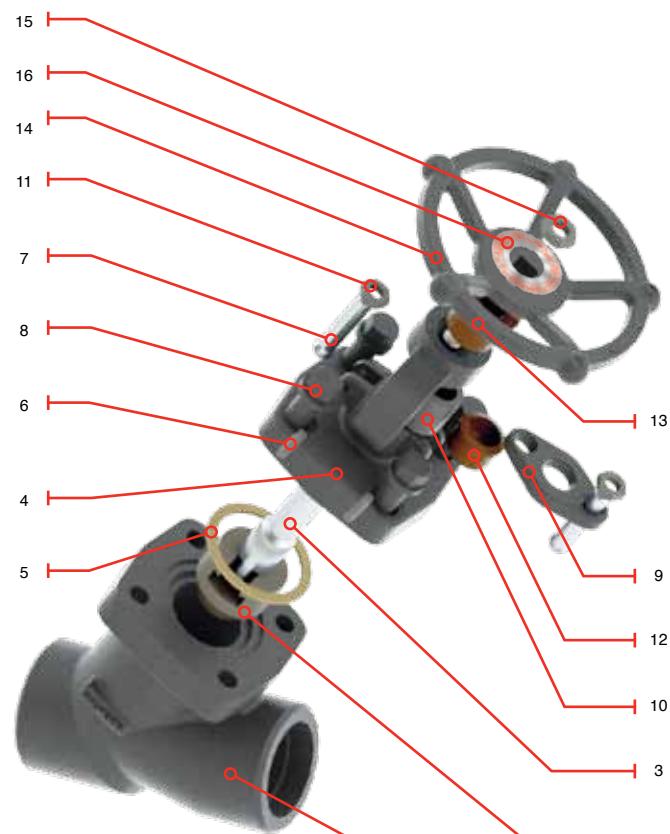

Stem packing is designed for optimum control of fugitive emissions leakage to the atmosphere. The ultra-low emission leakage rate is assured by the fine finish on the stem, the reduced diametrical clearances and the stem straightness control.

Backseat designed to relieve back pressure on the stem packing when fully seated. Replacing stem packing under pressure is not recommended.

Body to bonnet joint designed to apply a uniform load to the gasket to assure a leak proof seal.

Stellite seat ring, providing increased resistance to wear, abrasion and erosion of the sealing surface.

Integral welded seat or threaded seat.

WALWORTH FORGED STEEL PISTON CHECK VALVES

Piston Check valves are generally used to protect pumps or similar equipment, allowing the flow in only one direction and preventing flow reversal due to back pressure.

The piston check valves are designed with globe valve bodies, producing an increased drop pressure in the pipeline. This design provides a tight seal as well as a fast reaction to the closure impulse.

Metal seated check valves may not provide drop tight sealing when used in gas system or fluid system with low back flow pressure or fluids containing particles.

DESIGN FEATURES

- Valves in accordance with API-602.
- Socket weld, threaded, combined or flanged RF or RTJ ends.
- Bolted or Welded Bonnet options.
- Low fugitive emissions control.
- Nace service either MR-0175 or MR-0103
- Test in accordance with API-598.
- Horizontal Fluid Control
- Vertical Fluid Control with Spring

Body to cover joint designed to apply a uniform load to the gasket to assure a leak proof seal.

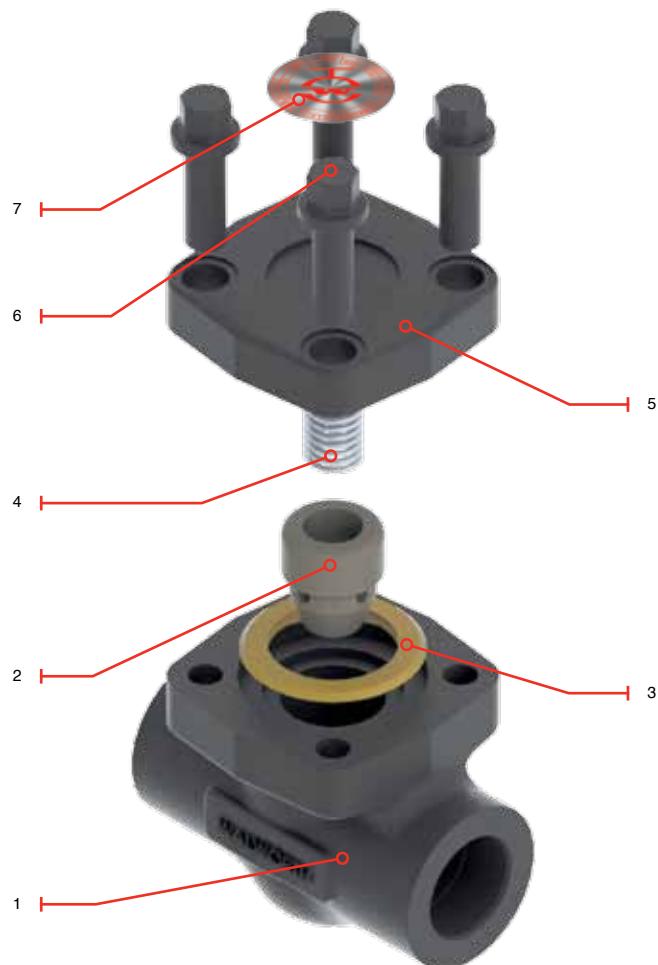

Guided piston to assure a correct seal.

Spring to allow a mounting in a vertical line available upon request.

Stellite seat provides increased resistance to wear abrasion and erosion of sealing surface.

WALWORTH FORGED STEEL "Y" PATTERN PISTON CHECK VALVES

"Y" Pattern Piston Check Valves are generally used to protect pumps or similar equipment, allowing the flow in only one direction and preventing flow reversal due to back pressure. Also is used when a laminar flow and increased CV is desired.

This design provides a tight seal as well as a fast reaction to the closure impulse.

Metal seated check valves may not provide drop tight sealing when used in gas system or fluid system with low back flow pressure or fluids containing particles.

DESIGN FEATURES

- Valves in accordance with API-602.
- Socket Weld, Threaded, Combined or Flanged RF or RTJ Ends.
- Bolted or Welded Bonnets Options.
- Low fugitive emissions control.
- Nace service either MR-0175 or MR-0103
- Test in accordance with API-598..
- Horizontal Fluid Control
- Vertical Fluid Control with Spring

Body to cover joint designed to apply a uniform load to the gasket to assure a leak proof seal.

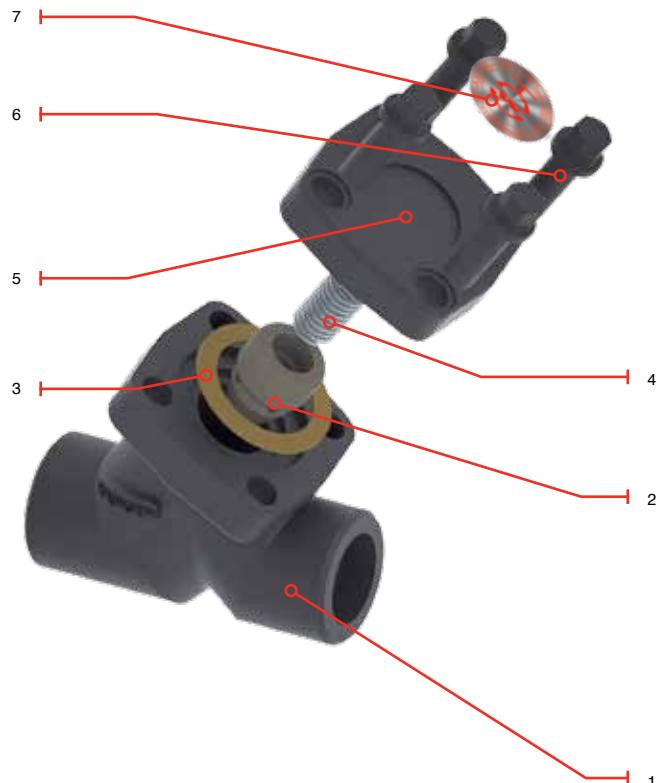

Guided piston to assure a correct seal.

Spring to allow a mounting in a vertical line available upon request.

Stellite seat provides increased resistance to wear abrasion and erosion of sealing surface.

WALWORTH FORGED STEEL BALL CHECK VALVES

Ball check valves are generally used to protect pumps or similar equipment, allowing the flow in only one direction and preventing flow reversal due to the back pressure.

The ball check valve can be used for a high viscosity fluid. The arrow stamped on the valves should match direction of the flow.

The sealing ability of check valves depends on the pressure of the back flow and the viscosity of the fluid.

DESIGN FEATURES

- Valves in accordance with API-602.
- Socket Weld, Threaded, Combined or Flanged RF or RTJ ends.
- Bolted or Welded Bonnet options.
- Low fugitive emissions control.
- Nace service either MR-0175 or MR-0103
- Test in accordance with API-598..

Body to cover joint designed to apply a uniform load to the gasket to assure a leak proof seal.

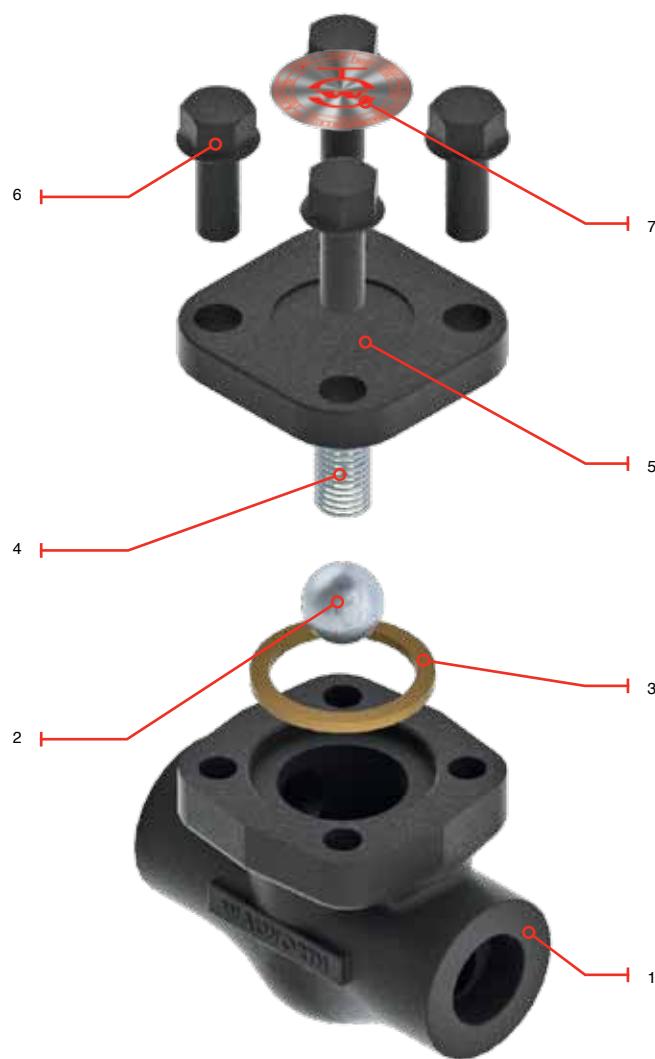

Spring to allow mounting in a vertical line.

Ball completely guided to assure a correct seal.

Stellite seat provides increased resistance to wear abrasion and erosion of the sealing surface.

WALWORTH FORGED STEEL "Y" PATTERN BALL CHECK VALVES

"Y" Pattern Ball Check Valves are generally used to protect pumps or similar equipment, allowing the flow in only one direction and preventing flow reversal due to back pressure. Also is used when a laminar flow and increased CV is desired.

This design provides a tight seal as well as fast reaction to the closure impulse.

Metal seated check valves may not provide drop tight sealing when used in gas system or fluid system with low back flow pressure or fluids containing particles.

DESIGN FEATURES

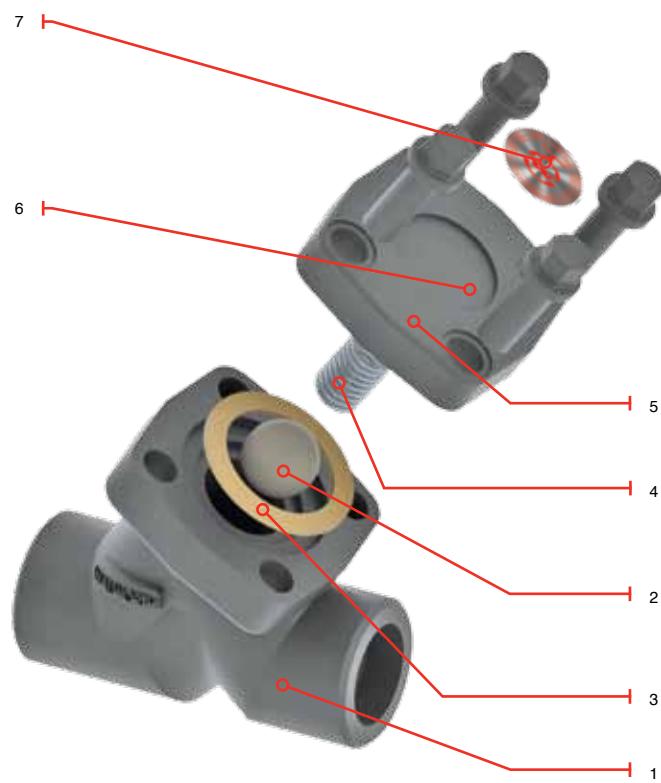

- Valves in accordance with API-602.
- Socket Weld, Threaded, Combined or Flanged RF or RTJ Ends.
- Bolted or Welded Bonnet Options.
- Low fugitive emissions control.
- Nace service either MR-0175 or MR-0103
- Test in accordance with API-598..

Body to cover joint designed to apply a uniform load to the gasket to assure a leak proof seal.

Spring to allow mounting in a vertical line.

Ball completely guided to assure a correct seal.

Stellite seat provides increased resistance to wear abrasion and erosion of the sealing surface.

WALWORTH FORGED STEEL SWING CHECK VALVES

Check valves are generally used to protect pumps or similar equipment, allowing the flow in only one direction and preventing flow reversal due to back pressure.

The swing type check valves are designed to produce a low pressure drop in the pipeline. This design provides a tight seal as well as a fast reaction to the closure.

DESIGN FEATURES

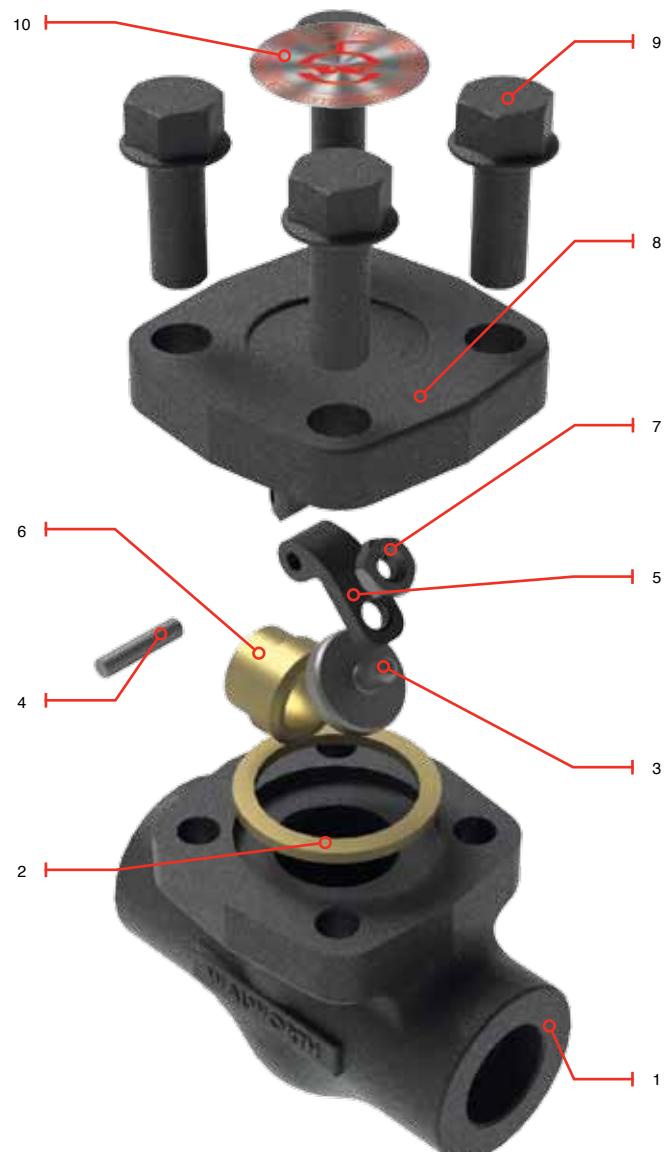

- Valves in accordance with API-602.
- Socket weld, threaded, combined.
- Bolted or welded bonnets options.
- Low fugitive emissions control.
- Nace service either MR-0175 or MR-0103
- Test in accordance with API-598..

Body to cover joint designed to apply a uniform load to the gasket to assure a leak proof seal.

Disc to hanger allows the disc a controlled movement independent to the hanger to assure proper disc alignment with the seat at closure.

The connection is secured by a welded disc nut to prevent disassembly due to vibration and closure impact.

Stellite seat ring provides increased resistance to wear abrasion and erosion of the sealing surface.

TECHNICAL INFORMATION

WEDGE DESIGN

Solid wedge characteristics:

- Its angled design offers facility to open and close without any difficulty. This provides a hermetic seal to the valve.
- Will handle fluids with high solids content without difficulty.

NACE SERVICE VALVES

The National Association of Corrosion Engineers (NACE) establishes standards for materials resistant to Sulfide Stress Cracking (SSC) to be used in hydrogen sulfide (H₂S) bearing hydrocarbon service.

NACE standard MR0175 defines a sulfide stress cracking region based on the relationship of H₂S present to the total operating pressure.

This must be considered when specifying valves for service where H₂S is present, as proper selection of materials is a customer's responsibility.

Sulfide stress cracking in materials not suitable for H₂S service can result in a sudden failure, causing damage to equipment and harm to personnel.

Important considerations when specifying NACE service

1. Hydrogen ion concentration (Ph).
2. Concentration and total pressure of the hydrogen sulfide (H₂S).
3. Concentration of water, carbon dioxide (CO₂) and chlorides.
4. Service temperature.

The customer can select valves made of alloy/carbon steel material with controlled hardness and/or a stainless steel material depending on the severity of the fluid. Valves having a body/bonnet with a controlled hardness of Rc 22 and studs/nuts of B7M/2HM can be combined with a customer selected trim and manufactured to meet NACE MR0175 requirements.

TECHNICAL INFORMATION

BODY AND BONNET JOINT GASKETS

WALWORTH Flanged end valves are available as bolted bonnet valves in classes 150, 300, 600 and 1500, and are furnished with a Stainless Steel Spiral Wound Graphite filled Bonnet Gasket as Standard.

WALWORTH Forged Steel Valves with Threaded, Socket Weld and Threaded X Socket Weld Ends in class 800 and 1500 are furnished with the Stainless Steel Spiral Wound Gasket as Standard, with the welded bonnet construction at the customer's option.

All WALWORTH ASME Class 2500 Forged Steel Valves are furnished in Welded Bonnet construction.

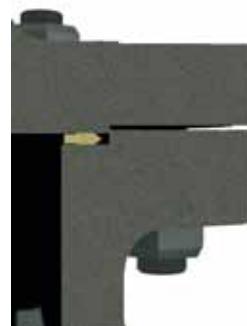

WALWORTH Valves can also be supplied with special materials to comply with specific requirements of the customer.

2. SPIRAL WOUND GASKET: Stainless Steel Type 316/ Graphite Filled (For F316)

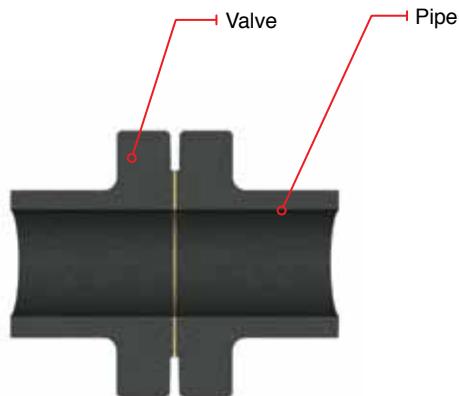

3. SPIRAL WOUND GASKET: With base materials per body material / Graphite Filled.(For special alloys)

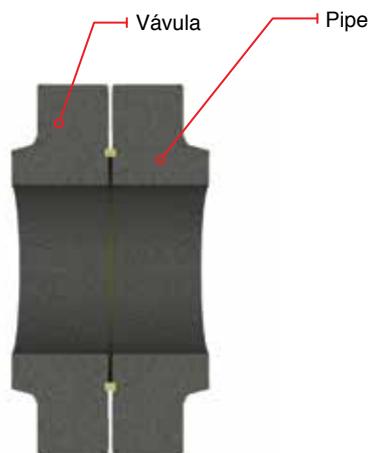

TECHNICAL INFORMATION

TYPES OF END CONNECTIONS

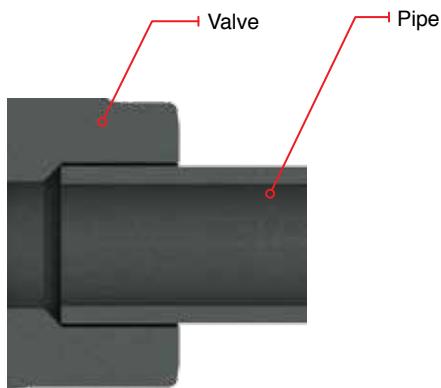

WALWORTH Forged Steel Valves can be supplied with Flanged ends in Raised Face or Ring Type Joint Ends as well as Threaded, Socket Weld, or Threaded X Socket Weld Ends.

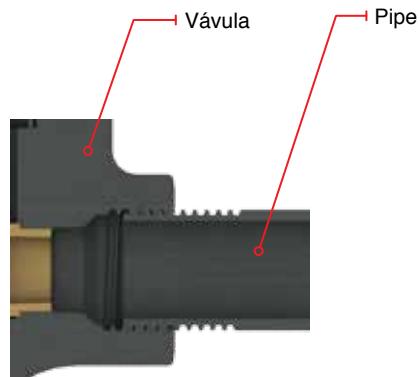

Flanged Raised Face

Flanged Ring Type Joint

Socket Weld End

Threaded Ends NPTF

VALVES FOR OXYGEN SERVICE

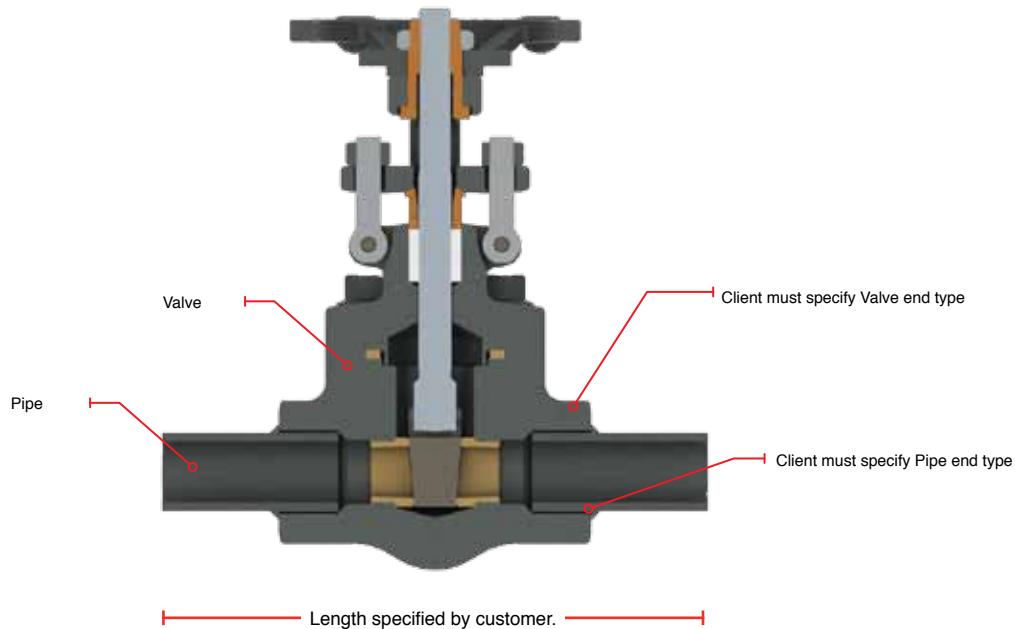

The Walworth Gate, Globe and Check Forged Steel Valves can be supplied for oxygen service. These valves are normally stainless steel type 316 or type 304 and are carefully cleaned by a chemical process to eliminate grease and any other residue. They are completely sealed in bags to prevent contact with the environment before being installed.

VALVES LOCKS

The Gate and Globe forged steel Walworth valves can be supplied with locks, to prevent operation by unauthorized personnel.

VALVE EXTENSIONS

These are the valves with extensions at the end using pipe nipples. For the valves to be supplied with extensions, the type of ends must be specified as well as the total length between ends.

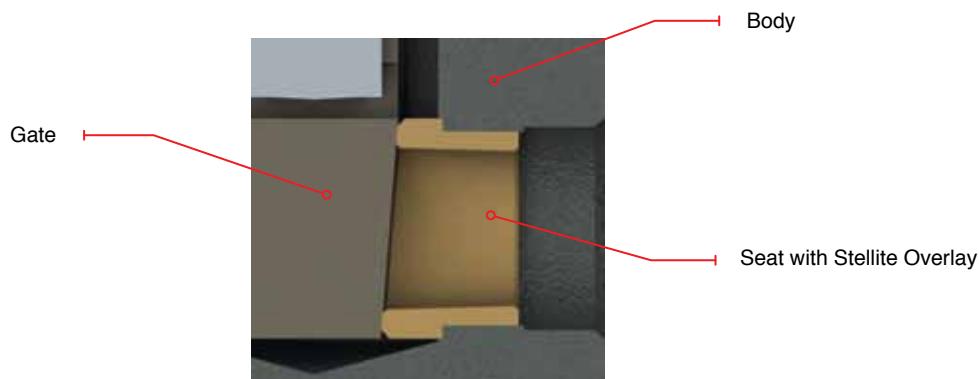

SEALING SURFACES OVERLAY

The type of material used to overlay the sealing surfaces on gates disks and seats is determined by the type of trim designated.

The Walworth Standard trims is API No. 8 (UT) where the sealing surface of the gate is overlaid with 410 Stainless Steel (13% CR) and the seat sealing surface is overlaid with stellite No. 6.

This Standard trim provides good resistance to corrosion, wear, abrasion and erosion that can be used by the fluid flowing through the system. The controlled difference in hardness between the 410 Stainless Steel and the Stellite No. 6 provides good resistance to damage during normal operation.

Walworth can furnish valves with a variety of trims and materials to meet the customer's requirements for an optimum service life.

(1) Upon prolonged exposure to temperatures above 425°C, the carbide phase of steel may be converted to graphite. Permissible, but not recommended for prolonged usage above 425°C.

(2) Only killed steel shall be used above 455°C.

(a) Flanged End Valve ratings terminate at 1000°F.

(*) Not to be used over 1000°F.

(a) Flanged End Valve ratings terminate at 1000°F.

DESIGN BASIS

All of WALWORTH's Valve Designs, when applicable, follow one or more of the following standards.

API	American Petroleum Institute.
	API 598 Valve Inspection and Testing
	API-602 Steel Gate, Globe, and Check Valves for Sizes NPS 4 (DN 100) and smaller for the Petroleum and Natural Gas Industries
ASME/ANSI	American National Standard Institute:
	B1.20.1 Pipe threads, general purpose (inch.)
	B16.5 Steel pipe Flanges and flanged fittings
	B16.10 Length of ferrous flanged and welding end valves
	B16.11 Forged fittings, Socket-Welding and Threaded
	B16.25 Butt-welding ends
	B18.2 Square and hexagon bolts and nuts
MSS	Manufactures Standardization Society of the Valve and Fittings:
	SP-6 Standard finishes for contact faces of pipe flanges and connecting-end flanges of valves and fittings
	SP-9 Spot facing for bronze, iron, and steel flanges and unions
	SP-25 Standard marking system for valves, fittings, flanges and unions
	SP-45 Bypass and drain connections
	SP-53 Quality standard for steel castings and forgings for valves, flanges, and fittings, and other piping components -Magnetic Particle Examination Method
	SP-54 Quality standard for steel castings for valves, flanges, and fittings, and other components -Radiographic examination method for surface
	SP-55 Quality standard for steel castings for valves, flanges, and fittings, and other components -Visual Method for evaluation of surface irregularities
	SP-91 (R96) Guidelines for manual operation of valves
	SP-92 (R92) MSS Valves user guide
	SP-93 Quality standard for steel castings and forgings for valves, flanges, and fittings, and other piping components -Liquid Penetrant Examination Method
ASTM Standards	American Society for Testing and Materials
	ASTM A 105 Standard specification for carbon steel forgings for piping applications
	ASTM A 182 Standard specification for forged or rolled alloy-steel pipe flanges, forged fittings, and valves and parts for high-temperature service
	ASTM A 193 Standard specification for alloy-steel and stainless steel bolting materials for high-temperature service
	ASTM A 194 Standard specification for carbon and alloy steel nuts for bolts for high pressure and high temperature
	ASTM A 276 Standard specification for stainless and heat-resisting steel bars and shapes
	ASTM A 350 Standard specification for carbon and alloy-steel forgings requiring notch toughness testing for piping components
NACE Standards	National Association of Corrosion Engineers
	NACE MR0175 Standard material requirements sulfide stress cracking resistant metallic material for oilfield equipment
Boiler and Pressure Vessel Code:	
	Section II Part A Ferrous Material Specifications.
	Section II Part B Non Ferrous Material Specifications.
	Section II Part C Specifications for Welding Rods, Electrodes and Filler Metals Specifications.
	Section V Non-destructive Examination.
	Section VIII Rules for Construction of Pressure Vessels, Divisions 1 and 2.
	Section IX Welding Qualifications

THE WALWORTH COMPANY GENERAL TERMS AND CONDITIONS

ACCEPTANCE: All quotations are for acceptance within 30 days from date of quotation unless extended in writing. In the event a purchase order is placed after this period of time, the WALWORTH Company reserves the right to requote base prices of all valves offered. All orders and contracts are subject to credit approval and acceptance by the WALWORTH Company.

FREIGHT: When prices are f.o.b. point of shipment - no freight allowance - we will attempt to route shipments in the method which will result in the lowest cost unless otherwise instructed. All shipments will be freight charges collect except when stipulated on the purchase order, in which case you will be invoiced for all transportation charges. Delivery of material to a common carrier shall be considered to be delivery to Buyer and shall be at Buyer's risk thereafter. Claims of loss of or damage to material in transit shall be filed by the Buyer directly with the carrier.

PRICES: There will be added to all prices quoted sales, use, occupation or any other excise or similar tax which Seller may be required to pay or collect on or in connection with the sale. Seller shall be established by Federal, State or other government regulation with respect to the product(s) topped by the order which shall be lower than the price(s) specified in the order.

ESCALATION TERMS: Prices shown in this price schedule reflect the costs in effect at the time of publication. These prices will remain firm on all products with a quoted delivery of twenty-six (26) weeks or less. On products which have a scheduled delivery of more than twenty-six (26) weeks, the goods will be invoiced based on the applicable price sheet in effect at the time of shipment. In no event will the invoiced price be less than the price originally quoted.

PURCHASED COMPONENTS: (i.e. motors, gearing, etc.) Prices are quoted on the supplier's price in effect at the time of quotation. Actual invoice price will be adjusted in accordance with the supplier's escalation policy.

DIFFERED SHIPMENTS: If for any reason the customer desires to delay shipments more than 30 days after manufacturing is complete, or to place a on hold or stop to the order during the manufacturing cycle, The WALWORTH Company reserves the right to consider the order cancelled and to invoke cancellation charges per the schedule below.

CANCELLATION: After order acceptance by WALWORTH, items or completed orders may be cancelled and Buyer will be charged for work performed, based on the following schedule:

- Five percent (5%) of prices of stock items.
- Ten percent (10%) of price of stock items ordered in quantities which exceed normal inventory levels.
- Five percent (5%) of prices prior to drawing submittal on made-to-order items.
- 15% after drawing approval, but prior to the start of castings.
- 30% to 50% during casting cycle, depending on the state of completion.
- 55% to 75% during machining and assembly operations, depending on the state of completion.
- 100% after final assembly and test.

REMITTANCES: Remittances must be made to the address indicated on the invoice.

CREDIT TERMS: As quoted. Invoices on balances overdue will be subject to a service charge of 1 1/2 % per month on such indebtedness.

DELIVERIES: Shipments and deliveries shall at all times be subject to the approval of Seller's Credit Department. If the Buyer shall fail to make any

payments according to the terms of the contract, Seller may, in addition to and not in limitation of its other rights and remedies, at its option, cancel all or any part of Buyer's incomplete contracts with Seller, or may defer shipments of deliveries under Buyer's contracts with Seller except upon receipt of satisfactory security or for cash shipment.

All schedule of shipments are estimated as closely as possible and Seller will use its best efforts to ship within the time scheduled, but does not guarantee to do so. Schedules commence with the date Seller receives authorization to proceed with the order, subject to the provisions of the next sentence. The order will not be released for manufacture until complete specifications and approved drawings (if drawing approval is required) are received at the plant of manufacturer and the estimated schedule of shipment will commence with the date of such receipt.

Seller shall not be liable for any direct, indirect or consequential damage or loss caused by any delay in delivery, regardless of the cause of delay.

Without limiting the generality of the foregoing, Seller assumes no responsibility for delays in delivery resulting from fire, flood, accidents, riots, strikes, transportation delays, labor or material shortages, existing or future laws, acts of any governmental authority, or any other cause beyond Seller's control. Items offered from stock are subject to prior sale.

INSPECTION: Final inspection and acceptance of products must be made at the plant of manufacture, unless otherwise provided in the order and/or in agreed upon specifications. Prices do not include charges for special tests or inspections performed at the request of the Buyer, unless called for in the order and/or in agreed upon specifications.

RETURNS: Permission in writing and return tagging instructions must be obtained from Seller before any goods returned for credit or adjustment will be accepted. Where returned goods are accepted, a minimum charge of 25% of the invoice price will be made, plus freight from both directions and costs of reconditioning the material for resale as new.

WARRANTY: Seller will replace without charge or refund the purchase price of products manufactured by Seller which prove to be defective in the material or workmanship, provided in each case that the product is properly installed and is used in the service for which Seller recommends it and that a written claim, specifying the alleged defect, is presented to Seller. Seller shall in no event be responsible for (a) claims for labor, expenses or other damages occasioned by defective products or (b) for consequences or secondary damages. THE WARRANTY STATED IN THIS PARAGRAPH IS IN LIEU OF ALL OTHER WARRANTIES, EITHER EXPRESSED OR IMPLIED. WITH RESPECT TO WARRANTIES, THIS PARAGRAPH STATES BUYER'S EXCLUSIVE REMEDY AND SELLER'S EXCLUSIVE LIABILITY.

DESIGN, ETC: Seller reserves the right to change design, materials or specifications without notice. There will be a charge for modifying an order after it has been entered when such change or modification results in additional engineering or clerical work for either The WALWORTH Company or our suppliers.

MINIMUM CHARGE: Orders totaling less than \$100.00 net will be billed at a minimum charge of \$100.00. Repair parts will be billed at a minimum charge of \$50.00.

NOTE: We reserve the right to correct obvious clerical errors in quotations, invoices, and other contracts.
